

Memorial Sloan Kettering  
Cancer Center.

# A Cancer Center's Experience in Improving Medication Safety

Amelia Chan, PharmD, MBA, MS, BCOP  
Memorial Sloan Kettering Cancer Center  
New York, NY  
April 21, 2024

## Disclosures

- I declare no personal, financial, or ethical conflicts of interest regarding the contents of this presentation.

# Objectives

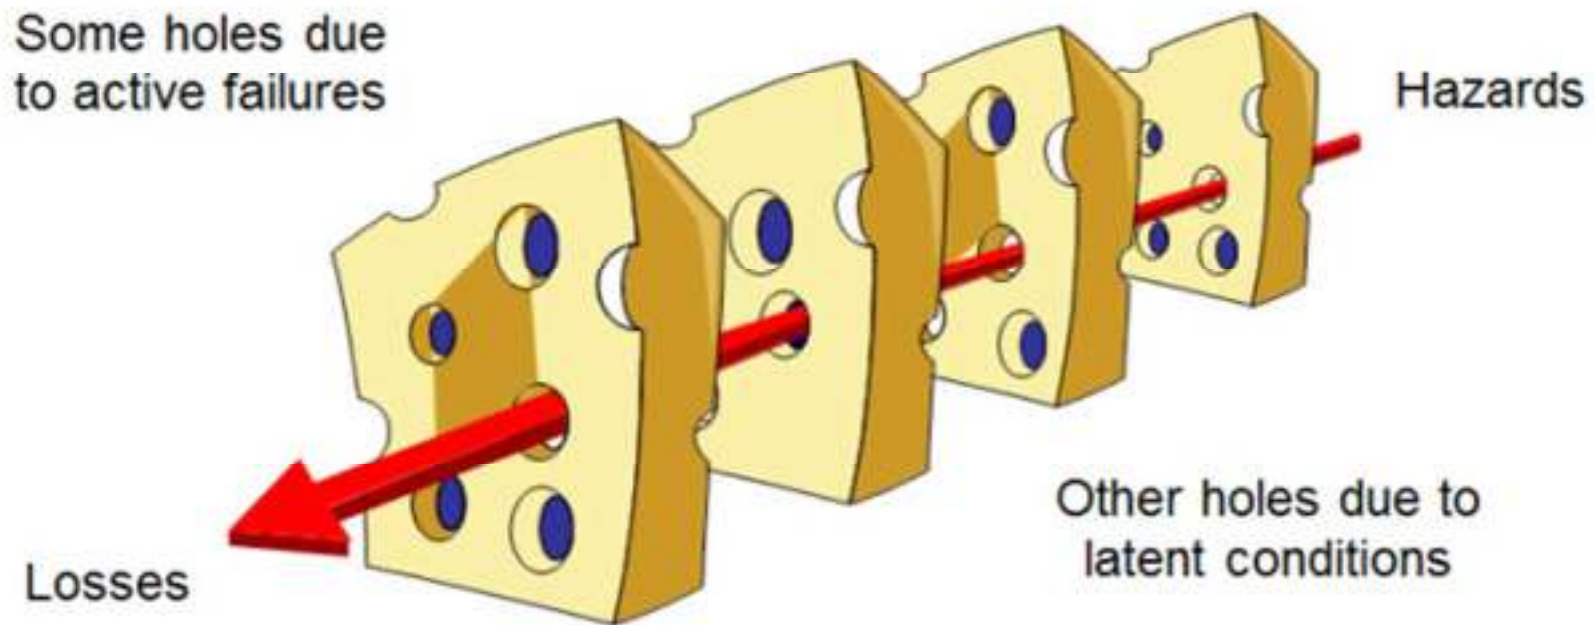

Describe medication event reporting

Evaluate, analyze and trend medication events

Formulate strategies to reduce medication errors

## What do we know about the holes?

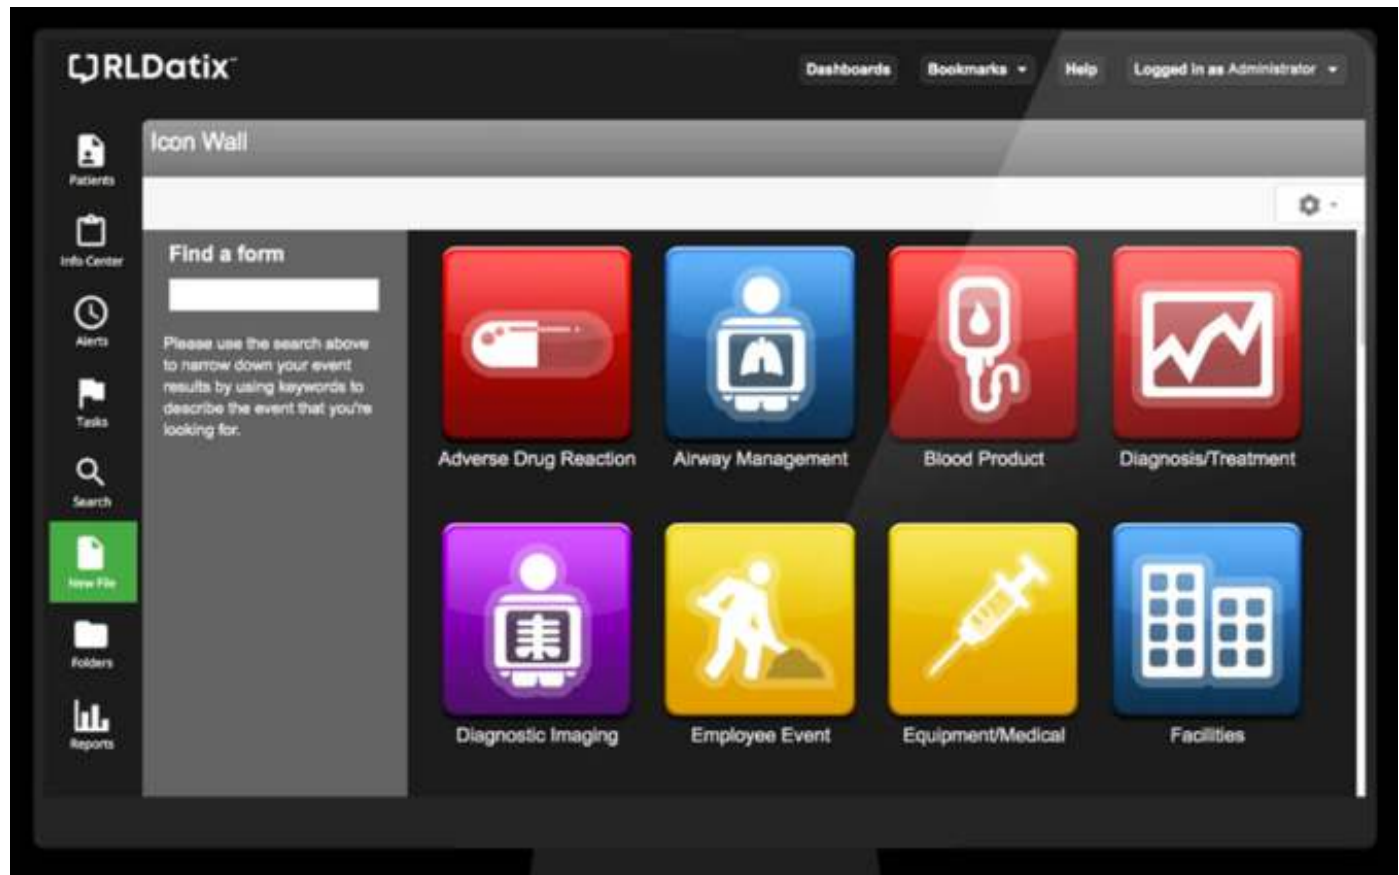

Adapted from: "Swiss Cheese" Model. Reason, J. (1990) *Human Error*. Cambridge: University Press, Cambridge.

# Standardization

## Specific Event Type

- Unknown/Other (please specify)
- Unordered medication
- Wrong dose/length
- Wrong frequency/datetime
- Wrong medication/fluid
- Wrong patient
- Wrong preparation
- Wrong rate
- Wrong route
- Wrong side/site/body part
- Wrong volume

## Key Terms

- Air in Line
- Alert Fatigue
- Biosimilar
- Night (7pm-7AM)
- Guidelines/Policy
- Delay
- RPh Verification
- Medication preparation
- Therapeutic duplication
- Coordination of Care
- Patients own medication
- PCA
- Medication Reconciliation
- RPh Verification
- Mislabeling
- Practice
- COVID-19
- Systems and Technology
- Home Medication List
- Admin Instructions
- Allergies
- Medical administration

## Severity Level

0	Near Miss	An unplanned event that did not reach the patient but may have resulted in injury or illness if it had.
1	No Harm	An event that reached the patient but resulted in no harm to the patient.
2	Temporary/Minor Harm	An event that results in any observable bruise, contusion, abrasion, etc.; an event that requires treatment as a result, such as a dressing, ice, suturing, administration of platelets or blood; an event that requires return to the hospital for procedures such as additional radiation oncology treatments, repeat scans, endoscopy procedures.
3	Permanent/Significant Harm	An event that results in an injury that requires a higher level of care, hospital admission, and/or surgery; injury that requires insertion of a device such as an endotracheal tube or chest tube; severe injury expected to impact activities of daily living such as fracture or intracranial bleed.

result of injuries related to the

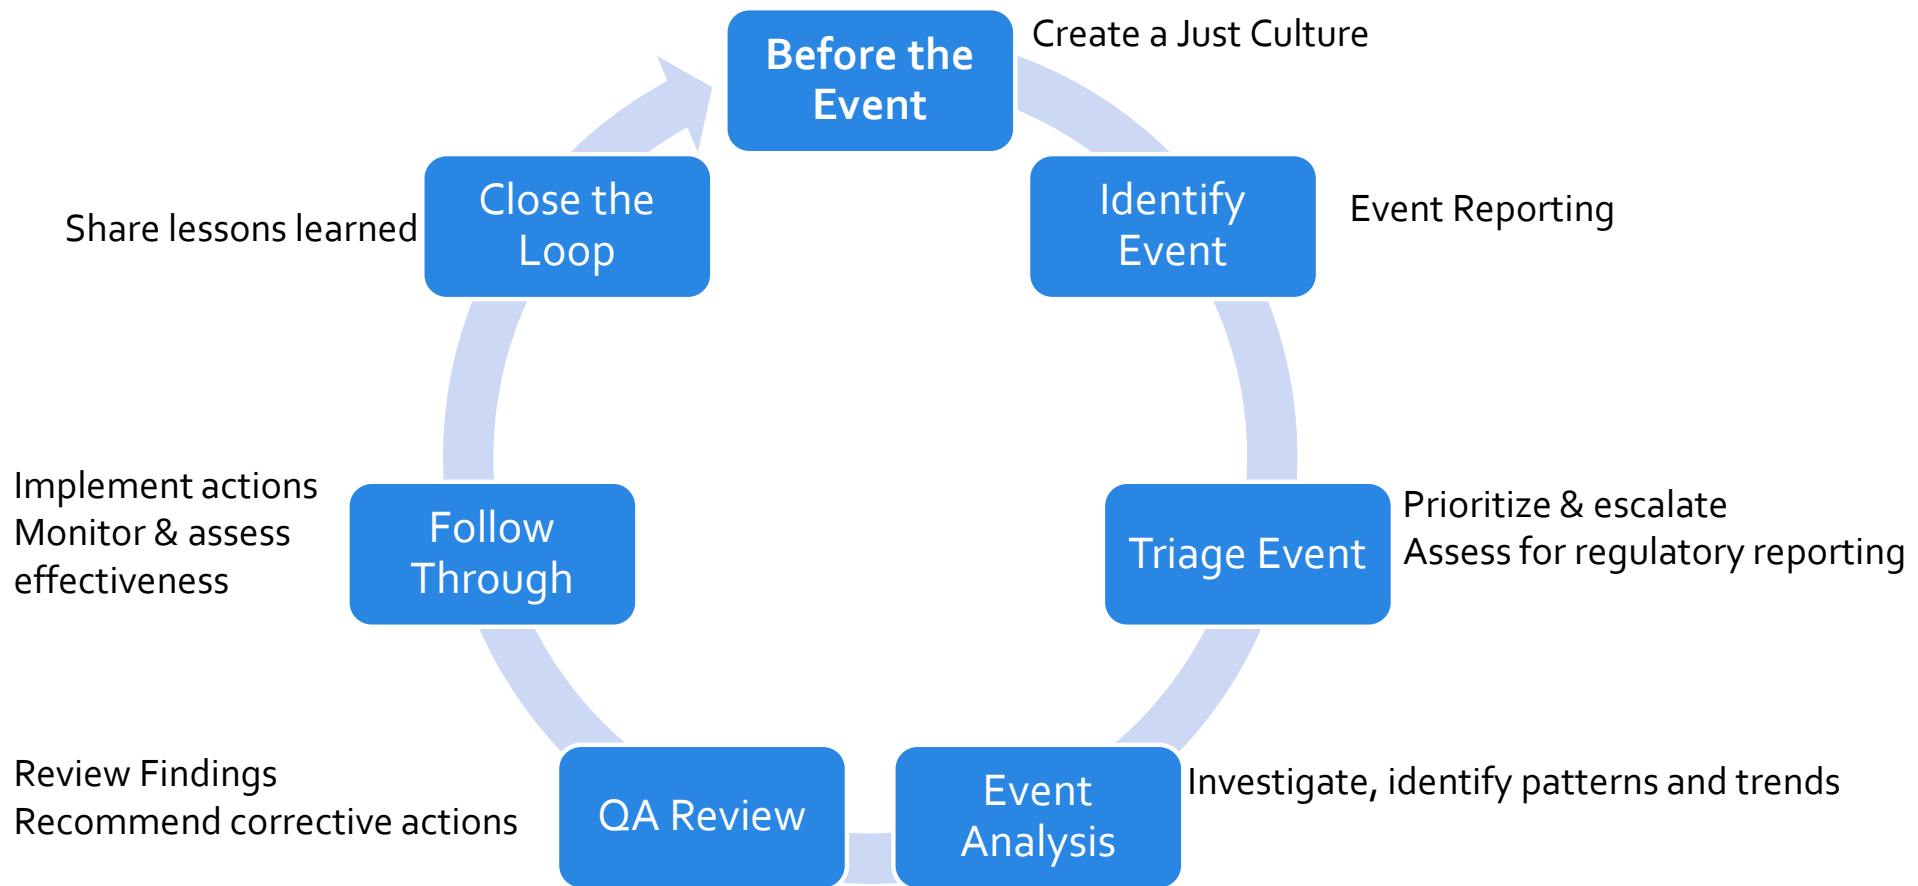

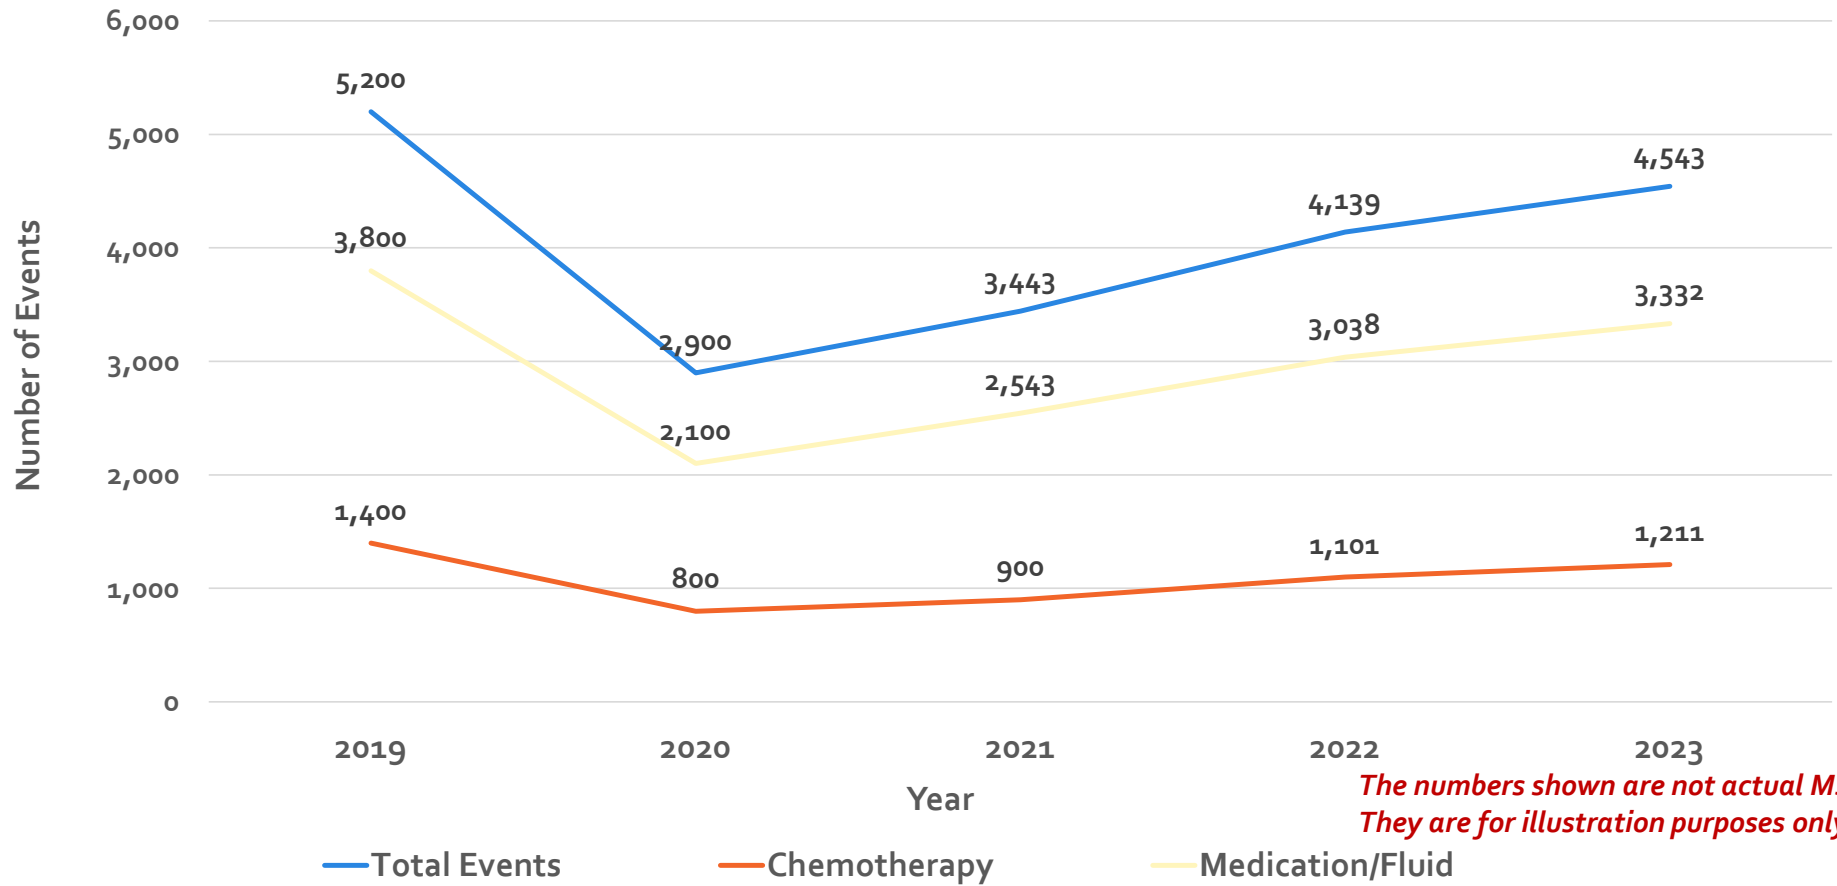

The background features a large, faint circle on the right side. Overlapping the bottom right of this circle is a stylized cross or plus sign. The cross is composed of several rectangular bars that meet at a central point, with a 3D effect of depth. The text is contained within a blue-bordered box on the left side of the slide.

# Evaluate, Analyze, and Trend Medication Events

# Medication Event Review

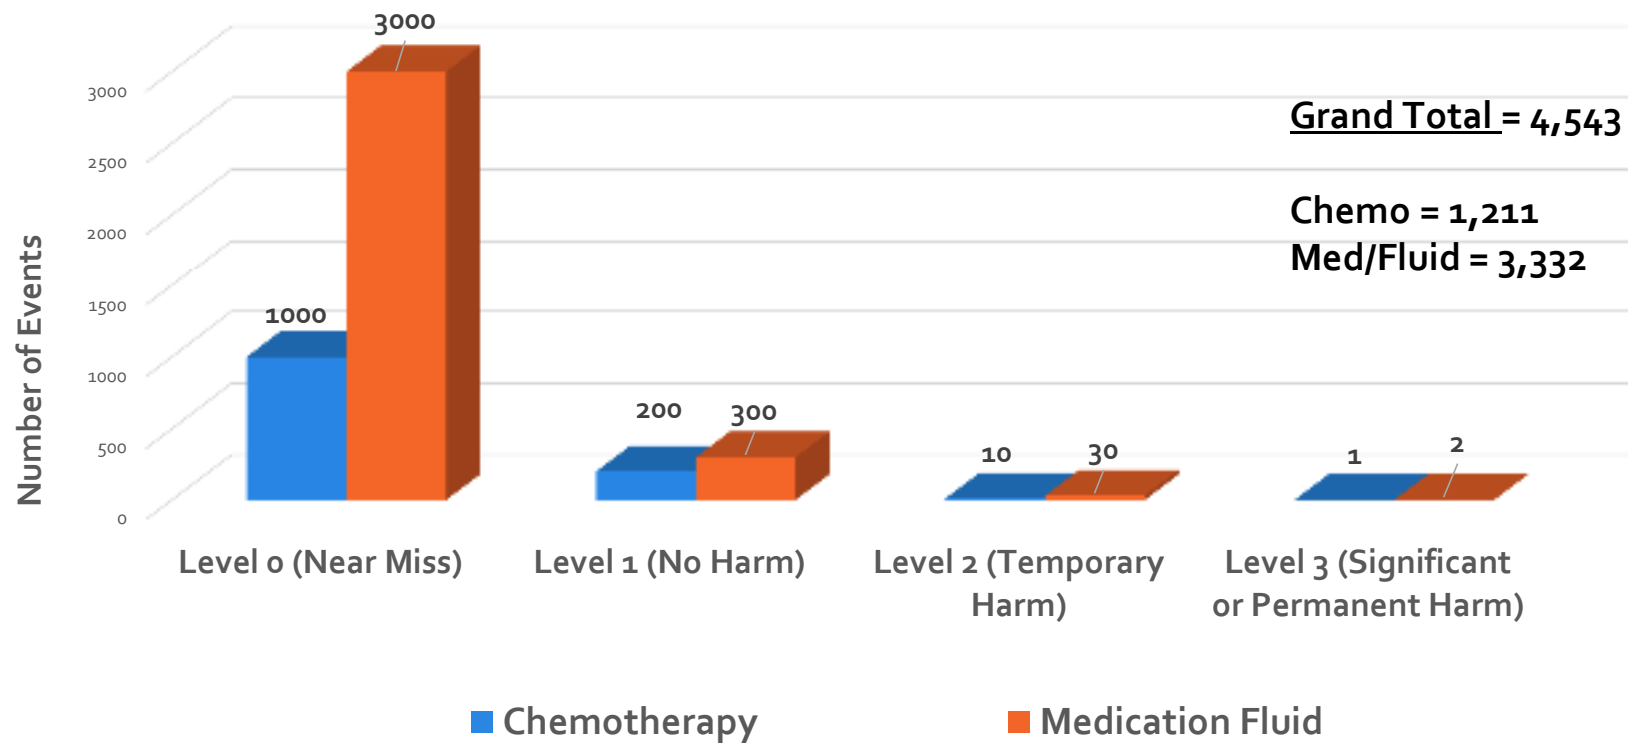

# Trend of Total Events

# Trend of Medication/Fluid Events by Severity

# Events by Severity

*The numbers shown are not actual MSK data.  
They are for illustration purposes only.*

# Number of Med/Fluid Events Reported by Location

*The numbers shown are not actual MSK data.  
They are for illustration purposes only.*

■ Main Hospital   ■ Clinic #1   ■ Clinic #2   ■ Clinic #3   ■ Clinic #4   ■ Clinic #5   ■ Clinic #6

# Medication/Fluid Events by Phase

**Total # of events = 4,543**

**Ordering/Prescribing = 1900 (41.8%)**

**Administration = 1,300 (28.6%)**

**Dispensing = 900 (19.8%)**

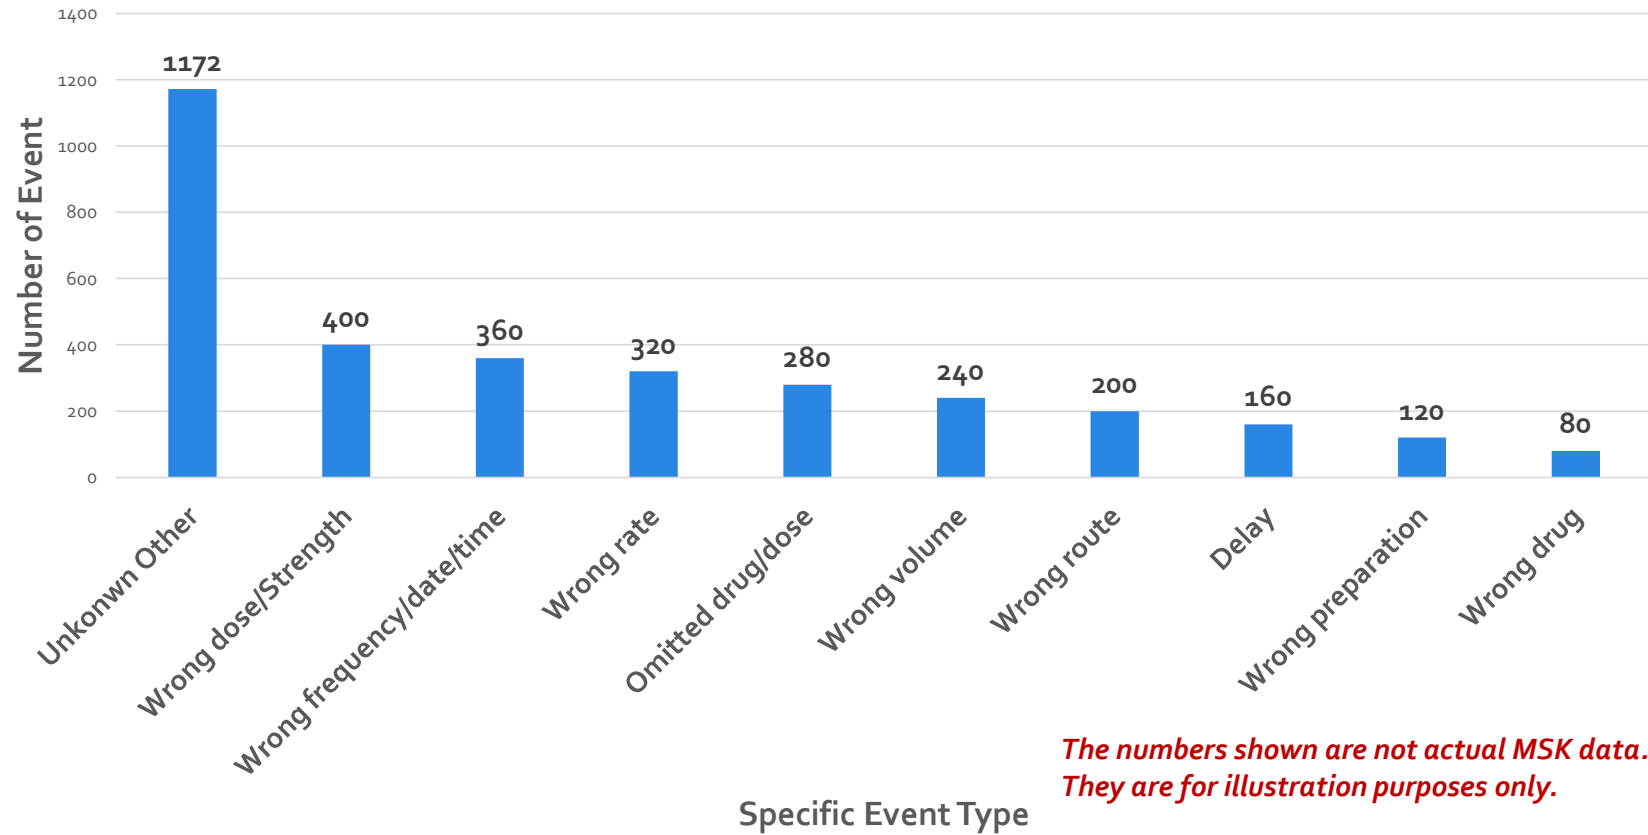

**Other = 443 (9.8%)**

*The numbers shown are not actual MSK data.  
They are for illustration purposes only.*

# Top 10 Med/Fluid Specific Event Types

# Risk Reduction Strategies

## Reactive Risk Management Strategies

- Use **medication event review** to identify and assess risk points
  - Involve employees in developing and implementing a continuous monitoring system to evaluate patient care, treatment, and safety
- **Performance Improvement Projects**
  - Use aggregate data and data analysis to trend and identify at-risk activities and processes
  - Collaborate with frontline staff and MSK experts in improving at-risk processes before patient harm occurs

# Performance Improvement Project Examples

1. Chemotherapy Verification Simulation Test
2. Look-alike, Sound-like Drug List Update
3. Managing Medications in Patients with Alpha-Gal Syndrome

# Chemotherapy Verification Simulation

Test

# Chemotherapy Order Simulation Test

## Goals:

- Evaluate training and education of chemo RPH
- Discover potential workflow issue/guideline update
- NOT used for staff performance appraisal

How was the test created?

1. Reviewed chemo med events reported

2. Selected cases to be used for simulation

Test questions validated by managers

3. Test distributed to all chemo pharmacists

Via survey monkey: 10 chemo eATO for evaluation

Evaluate based on provided information and check off sources used during order review

Provide explanation for rejected orders

# Chemotherapy Verification Simulation Test

- **Ten chemo orders for evaluation**
  - Staff submitted answers via SurveyMonkey
  - Provided staff with sufficient information in the test to evaluate the chemo order
  - Staff may use any resources but must complete the test independently
  - Staff was asked to determine whether the chemo order is acceptable for verification
- **Must provide explanations for rejected orders**
- **Must point out all errors to receive credit**

## Chemo Verification: What to Check?

- Chemo RPHs were asked to check off all sources that may apply during chemo order review. The following are expected to be checked off:

	Checked Off by	%
chemotherapy drug guidelines (parenteral & oral)	120/121	
chemotherapy regimen guidelines	121/121	
IRB protocols	116/121	
height & weight in CIS	119/121	
medication profile	120/121	
lab value/treatment parameters	119/121	
cumulative anthracycline dose	108/121	
previous cycle (dosage, administration date, etc)	118/121	
allergies	118/121	
NCCN Guideline	83/121	
global rx note	118/121	

# Look-alike, sound-like Drug List Update

# Look-alike, Sound-alike Medications

## "Look-Alike/Sound-Alike" Medication Names at High-Risk for Confusion

### **PARENTERAL Chemotherapy/Biologic**

- This list of medications is available on the MSK Formulary and is identified as HIGH RISK for confusion due to similarities in spelling and pronunciation.
- Strategies are employed in efforts to prevent/minimize the risk of occurrence
  - 1) Use of Tall man lettering in all electronic systems and Smart pump drug libraries
  - 2) Use of Tall man lettering for patients' medication labeling
  - 3) Use of Tall man lettering and segregation in medication storage areas such as shelf/bin, Omnicell, medication servers, refrigerators. Click [HERE](#) for separation strategies.

asparaginase Erwinia ( <b>RECOMBINANT</b> )-rywn	<b>PEG</b> aspargase	<b>CAL</b> aspargase pegol-mknl	
<b>ADAL</b> imumab	<b>AVE</b> lumab	<b>ATEZO</b> lizumab	<b>ALEM</b> tuzumab
<b>bEVA</b> icumab	<b>BLINA</b> tumomab	<b>bREN</b> tuximab vedotin	
bendamustine	<b>CAR</b> mustine		
<b>ceMIPL</b> imab-rwlc	<b>doSTAR</b> limab-gxly

<b>coPAN</b> lisib	<b>CARBO</b> platin	<b>CIS</b> platin	<b>OXALI</b> platin
<b>DAR</b> atumumab	<b>dINU</b> tuximab	<b>durVAL</b> umab	<b>duPIL</b> umab
<b>DAUNO</b> rubicin	<b>LIPOSOMAL DAUNO</b> rubicin-cytarabine	<b>DOXO</b> rubicin	<b>LIPOSOMAL DOXO</b> rubicin
denosumab 120 mg ( <b>XGEVA</b> )	denosumab 60 mg ( <b>PROLIA</b> )		
<b>eCUL</b> izumab	<b>enFORT</b> umab vedotin-ejfv	<b>eLO</b> tuzumab	<b>GEM</b> tuzumab ozogamicin
<b>eriBULIN</b>	<b>EPIRUB</b> icin	<b>IDA</b> rubicin	
<b>iPIL</b> imumab	<b>INF</b> liximab	<b>INO</b> tuzumab ozogamicin	

## Recommendations

- Ensure all look-alike, sound-alike (LASA) bins are labelled with Tall Man Lettering
- Separate LASA drug pair by at least 2 bins (horizontally)
- Select LASA bin labels to include both brand and non-proprietary name – levoFLOXAcin (Levaquin); leveTIRAcetam (Keppra) – buPROPion (Wellbutrin; Zyban); busPIRone (Buspar)
- Select LASA bin labels to include indications/therapeutic category

Separate by 2 bins

# Managing Medications in Patients with Alpha-Gal Syndrome

## Managing Medications in Alpha-Gal Syndrome

- Alpha-gal syndrome (AGS) is also called alpha-gal allergy, red meat allergy, or tick-bite meat allergy. It is an allergic condition in which people react to alpha-gal, a sugar molecule found in most mammals (pork, beef, rabbit, lamb, venison, etc.)
- In addition to foods, inactive ingredients in medications may trigger reactions in these patients. Below are resources to assist in the management of patients with alpha-gal syndrome.
