Online Vaccination Monitoring for Adults

Whereas, the use of vaccination registries for pediatric patients has proven instrumental in achieving complete and timely vaccinations consistent with ACIP recommendations, and,

Whereas, vaccination schedules are becoming increasingly complex and robust in adult patients, e.g. pneumococcal vaccine selection and sequencing, and,

Whereas, patients experience challenges in tracking their personal vaccination schedules as much as, if not more than their chronic medications, and,

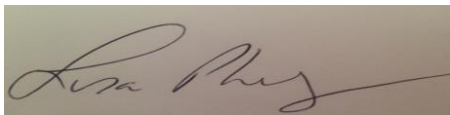

Whereas, health systems are directing extensive resources to develop protocols, best practice techniques and order sets in order to identify and vaccinate eligible patients,

Therefore, be it resolved that, the New York State Council of Health-Systems Pharmacists supports the development and implementation of an online vaccination registry for adult patients to ensure that providers across the state have the most up-to-date vaccination information for their patients.
